

# Image Resizing: How do I get my image's file size to be small? I want my image to be less than 7kb

It's impossible to predict how well an image will compress. It's a process of trial and error. If you want a smaller image, select a lower image quality using the buttons up at the top of the resizr screen, and hopefully, your image will be small enough!

Experiment and try a few options, check and see which one works best for you.
