

# Image Resizing: How do I crop a image that is on a website, not my computer?

You need to either download the image onto your computer or provide resizr with the URL of the image.

To find the URL of an image, you can usually right click the image and "view" the image. The URL will be shown in your browser's URL box. If you can't right click because you have a mac, I'm not sure exactly how to help you.

However, you can see if "[How To Right Click on a Mac](#)" helps.
