Help: How do I crop someone out of a picture using Resizr?

Select one of the "crop" options.   "Free Crop" lets you crop however you want.   The other options are there to let you specify the proportions of the image.   For example, if you want to print a 5x7 image, you can select "choose manually" and enter "5" and "7" (or any number you want)

The crop box that shows up can be changed in size by mousing over the edges of the crop box, and if you select a 4x6, 6x4, or 'choose manually,' the relative length and width of the crop box will be preserved.
